- WR Meadows Solvent Based Sealer
- AC 1315 High Gloss Solvent Based Sealer
- WR Meadows Water Based Sealer

Direct Colors Tinted Sealer can be applied to fresh or previously sealed concrete and is suitable for indoor or outdoor use. Tinted Sealer is an ideal one-step color option for any project and offers a more solid consistent color finish.

Tinted Sprayable Satin Finish sealer can be applied with a pump-up fence and deck sprayer and has a drying time of 4-5 hours. Nothing can beat this product for speed and ease of use. Tinted Sprayable Satin Finish is particularly setailor a project to the expectations of the client. Liquid Colored Antique can be ap-

plied to previously sealed surfaces to restore integrally-colored or stained outdoor concrete. While designed for use with textured or stamped surfaces, Liquid Colored Antique can be used on smooth concrete and is an excellent alternative to acid stain on older more porous outdoor slabs.

Liquid Colored Antique contains a dispersant to maintain even distribution of pigment particles throughout the mix, but settling will occur. Stir or shake vigorously before pouring into the sprayer, and regularly agitate the mixture to prevent settling in the sprayer. Our product can also be applied with a sponge or sponge brush to create different textures and appearance on the surface.

The coverage rate for Liquid Colored Antique is influenced by several factors including surface porosity, existing surface color, desired color saturation among others. The average coverage rate is 200-300 sq. ft. per gallon. All antiqued surfaces must be sealed to preserve and enhance the color of the slab. Most sealed surfaces will wear over time and should be re-sealed every 2-3 years.
